HARVESTING, PROCESSING AND QUALITY CONTROL

Baled immediately following the harvest of the grain, our 3'x4'x8' bales of straw are hauled into storage to await processing.

The moisture is regularly checked during baling and when hauled into storage.

Our quality control begins in the field, is re-evaluated during processing, and a final check is conducted during shipment.

Our straw can be used as **feed** as well as **bedding** for animals.

Due to the **high fiber** content, adding straw to the feeding ration increases overall animal health, and intake of nutrients.

Straw **decomposes** in approx. 1-3 months.

We provide **Wheat**, **Barley** and **Timothy** straw.

We also offer **Oat** or **Rye** straw on a limited basis.

Additional details (pictures and laboratory analysis) can be provided upon request.

PRODUCT SIZE

- 27kg bales
- 55kg bales
- 400kg sleeve bales
